

India Smartphone & Social Media Analytic (2015–2025)

- **Prepared by:** Rajashri Ambulkar
- **Project Type:** Excel Data Analytics Dashboard

Executive Summary

This dashboard analyzes India's smartphone, internet, and social media trends from **2015 to 2025** using a research-based dataset.

Key Business Insights

- Internet users grew from around **300M** in 2015 to **806M** by 2025.
- Social media users reached approximately **491M** in 2025, showing rapid digital adoption.
- **Android** dominates the smartphone market with a **95%** market share.
- Average daily social media usage reached **3.2 hours**.
- **YouTube** is the most-used social media platform in the dataset, followed by Instagram and Facebook.
- The data indicates continuous growth in digital engagement across the decade, making internet accessibility and responsible screen-time management increasingly important.

Project Objective

The objective of this project is to analyze India's smartphone, internet, and social media usage trends between **2015 and 2025** using Microsoft Excel.

The project demonstrates how research-based data can be transformed into an interactive dashboard using Power Query, Pivot Tables, Pivot Charts, KPIs, and Slicers. The dashboard helps identify digital adoption trends, platform popularity, device market share, and screen-time patterns that support data-driven decision-making.

Dataset Overview

The dataset was created using research-based public sources and organized into a structured Excel table before analysis.

Dataset Information

- **Total Records:**49
- **Time Period:** 2015–2025
- **Primary Country:** India
- **Data Type:** Research-based compiled dataset
- **Dashboard Tool:** Microsoft Excel

Dataset Columns

Column	Purpose
Year	Year of the observation
Category	Main data category
Subcategory	Specific topic (Internet, Social Media, Android, etc.)
Metric	Measurement name
Value	Numerical value
Unit	Measurement unit
Source	Research source
Impact	Positive, Negative, or Neutral impact
Trend_Type	Internet/Social Media trend filter for the dashboard

Data Sources

The dataset was compiled from publicly available research and government sources, including:

- DataReportal – Digital 2025 India Report
- Government of India (PIB) Digital Reports
- UNICEF Data
- Research studies on smartphone and social media usage

Dashboard Overview

Dashboard Explanation

The dashboard was designed to present key smartphone and social media trends in a clear and interactive format.

Dashboard Components

- KPI Cards:** Display key metrics including Internet Users (806M), Social Media Users (491M), Android Market Share (95%), and Average Daily Screen Time (3.2 Hours).
- Trend Analysis:** A Pivot Line Chart shows Internet and Social Media growth from 2015 to 2025 with an interactive slicer.
- Platform Comparison:** A Horizontal Bar Chart compares YouTube, Instagram, Facebook, and Snapchat users.
- Device Market Share:** A Donut Chart highlights Android's dominant market share.
- Interactive Filters:** Slicers allow users to switch between different trend views without changing the dashboard layout.

Key Findings

The analysis highlights several important digital trends in India.

Major Findings

- Internet adoption has grown consistently over the past decade.
- Social media usage has increased significantly alongside smartphone adoption.
- Android remains the dominant smartphone operating system in India.
- YouTube is the leading platform among the selected social media platforms.
- Higher screen-time trends indicate the importance of responsible digital usage, especially for younger users.
- Research-based data can be transformed into meaningful business insights through Excel dashboards.

Conclusion

This project demonstrates the complete workflow of an Excel-based data analytics project—from collecting research-based data to building an interactive dashboard.

The project combines Power Query, Pivot Tables, Pivot Charts, KPI Cards, Slicers, and dashboard design to transform raw information into meaningful insights.

This dashboard showcases practical Excel skills that are valuable for Data Analyst internship roles and demonstrates the ability to organize, analyze, and present data effectively.
